

and a game table as disclosed herein, a dealer deals 71 a set of cards to each of a plurality of players and to the dealer itself, an equal number of cards being dealt to each player, the equal number being from three to seven cards. The players make a wager 70; and this can be done prior to or subsequent to the cards having been dealt 71. As described above, the variations in the number of received cards are that players and dealer each receive four cards 72; participants receive four cards, and may purchase a replacement card for a fee 73; participants receive five cards and may discard a card 74; participants receive five cards 75; players receive four cards, dealer receives five and discards one card 76; and/or participants each receive three cards 88. Thereafter players and dealer arrange their hands into two half hands 77. The players compare their high half hand to the dealer's high half hand and the players compare their low half hand to the dealer's low half hand 78. A player wins 85 both hands by being lower than the dealer's low hand, and higher than the dealer's high hand 79. A player pushes 86 if the player wins one hand and pushes the other 80, or if the player wins one hand and loses one hand 81. A player loses 87 if the player loses one hand and pushes one hand 82, pushes both hands 83, or loses both hands 84.--
